

PACKAGE PRICES

PREAMBLE

The package price covers all costs, including hospitalisation expenses and medical fees, all examinations carried out, even outside the Centre, and treatment of any post-operative complications connected with the operation.

The package price can only be fixed after the patient has been examined or precise and detailed information on his/her clinical case has been provided.

The "standard package" is subject to an additional charge of 20% for complex cases, 50% for complicated cases and 70% for a combination of complicated /complex cases and/or emergencies.

In intensive care, assisted ventilation, intra-aortic balloon pumping and renal dialysis are included (unless artificial life support equipment has to be maintained for more than 15 days due to the patient's previous [pre-intervention] state of health). Assisted circulation by ventricular prosthesis is not included.

The package price covers the patient's aftercare, by the Centre's doctors, for one month after hemodynamic investigations, for six months after interventional cardiology procedures and for one year after surgical operations, as well as, during that period of time*, and depending on the package price, re-operations and hospitalisation connected with the procedure but not with the development of the causal pathology or of a previous or intercurrent pathology.

The procedures covered by the package price and the gravity of the pathology are listed in each section so that pre or post-interventional examinations can be carried out in a simple and objective way.
Emergency admission of a patient: pathological condition with risk of death within 48 hours if the appropriate medical treatment is not administered.

The following is a non-restrictive and non-exhaustive list of conditions constituting an emergency: myocardial infarction (within the first 48 hours or mechanical and/or rhythmic complications at any time), irreversible cardiac insufficiency, heart failure with acidosis, acute dysfunction of prosthesis, progressive infectious endocarditis, acute aortic dissection, fissured vascular aneurysm, unstable angina pectoris,...

* with the exception of surgery for congenital cardiopathies and surgery performed on infants and new-born babies.

HEMODYNAMIC INVESTIGATIONS & INTERVENTIONAL CARDIOLOGY

STANDARD	COMPLEX (+ 20 %)	COMPLICATED (+ 50 %)	INTERNATIONAL CODIFICATION	PACKAGE PRICE (standard room) Euros	PRIVATE SECTOR SUPPLEMENT (*) Euros
A 10 - AMBULATORY HEMODYNAMIC ANGIOGRAPHIC AND VENTRICULAR INVESTIGATIONS OF THE CARDIAC CAVITIES AND PRINCIPAL VESSELS <ul style="list-style-type: none"> Investigation of the cardiac or vascular structures by magnetic resonance with or without injection during a cardio-vascular check-up. Investigation of the cardiac or vascular structures by multi-slice CT scanner with or without injection. Angiography, angio-pneumography, coronary angiogram. Thoracic and abdominal aortic angiography. Angiography of the peripheral vessels. Transesophageal, Dobutamine or stress echography in Day-Hospital. Special cases: cardiac investigation and coronary angiogram requiring magnetic resonance and multi-slice CT scan during the same session. 			A1000 Standard	2,000	
			A1010 Standard	3,000	
A 11 - HEMODYNAMIC INVESTIGATIONS (SPECIAL CASES) <p>Explorations prior to surgical procedures, during the same hospital stay, will be billed at the applicable rate. Explorations prior to interventional cardiology procedures, realized on the same day, are included in this second package. Otherwise, a charge of 50% is applied to this package. Approximate length of stay: 24 or 48 hours.</p> <ul style="list-style-type: none"> Satisfactory control investigation. Investigation not revealing severe lesions or requiring extensive therapeutic treatment. Isolated investigation of the cardiac or vascular structures by magnetic resonance with or without injection and/or multi-slice CT scan during a cardio-vascular check-up that requires a 24-hour hospitalisation. Administration of an electric shock to treat atrial arrhythmia. 			A1100 Standard	4,800	(+) 2,400
A 12 - HEMODYNAMIC INVESTIGATIONS <p>Explorations prior to surgical procedures, during the same hospital stay, will be billed at the applicable rate. Explorations prior to interventional cardiology procedures, realized on the same day, are included in this second package. Otherwise, a charge of 50% is applied to this package. Approximate length of stay: 3 days.</p> <ul style="list-style-type: none"> Right and/or left heart catheterisation with angio-pneumography or aorto-arteriography. Coronary angiogram. Full electro-physiological investigation. Investigation, measurement of the cardiac structures (ventriculogram and aorticulogram), of systolic and diastolic functions, with dynamic and graphic recording and/or analysis and measurement by magnetic resonance, of the contractility and viability of the ventricular wall. Coronary angiogram and perietography by magnetic resonance and/or multi-slice CT scan. Catheterisation in infants, new-born babies or children under two. Complex electro-physiological investigation with endo-cavitary mapping. Catheterisation with right and/or left endo-cavitary heart biopsy. Study of the coronary microcirculation, assessment of the functional impact of coronary lesions (FFR). Endocoronary study by ultrasound or luminography (OCT or IVUS). All emergency hemodynamic investigations due to acute cardiac or coronary insufficiency. Coronary angiogram with or without thrombolysis in acute phase of myocardial infarction. Pulmonary embolism with respiratory distress. Circulatory arrest to treat arrhythmia. Intra-aortic balloon pumping or peripheral assisted circulation (devices not included).
